

FM-Web Information Service

We at MiX Telematics believe that fleet operators know the importance of understanding the total cost of ownership when deciding to buy or subscribe to a fleet management product or service. This is exactly why our FM-Web information service offering is a very attractive option.

Attractive service offering

Customers fear hidden costs and are not always in a position to easily quantify the cost over the lifetime of their fleet management product - especially communication costs and maintenance. This is why the MiX Telematics information service offering is a very attractive option.

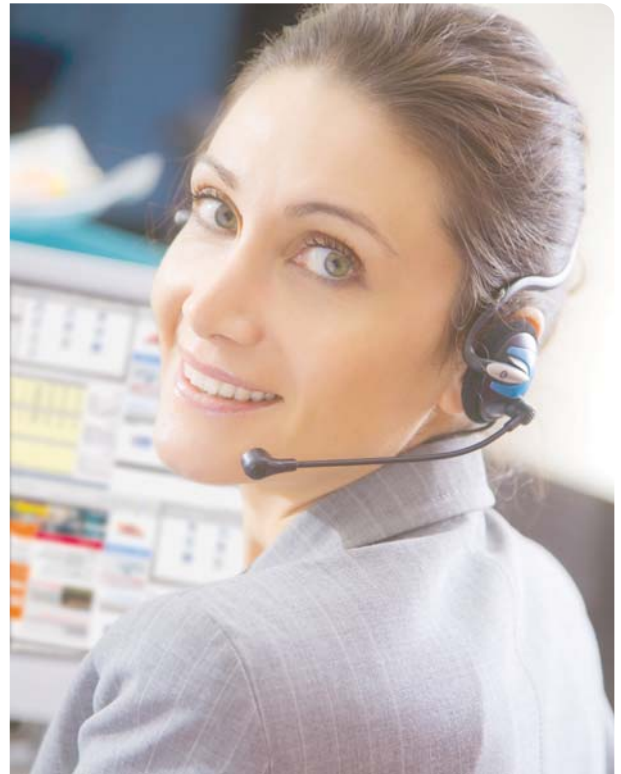

One of the benefits of the service that makes MiX Telematics stand out, is our unique Communication Cost Control® feature, where we fix and manage your communication costs as part of the monthly service fee, without compromising the quality or quantity of data. This means you get an all inclusive service at a fixed price.

Real-time tracking & exception management

Being the first South African provider to offer GPRS services in an office environment, we have led the way in pioneering GPRS tracking functionality.

We offer you real-time tracking and exception management while your vehicles are in a trip and as soon as they park, the rest of the data is automatically downloaded - allowing for immediate driver de-briefs and assessments.

We host, administer and manage all the data on your behalf, so it is always available for you for driver and vehicle performance analysis.

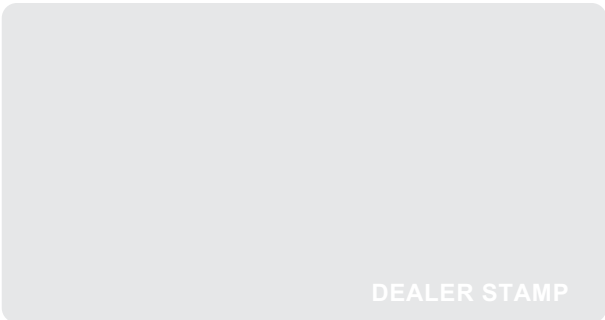

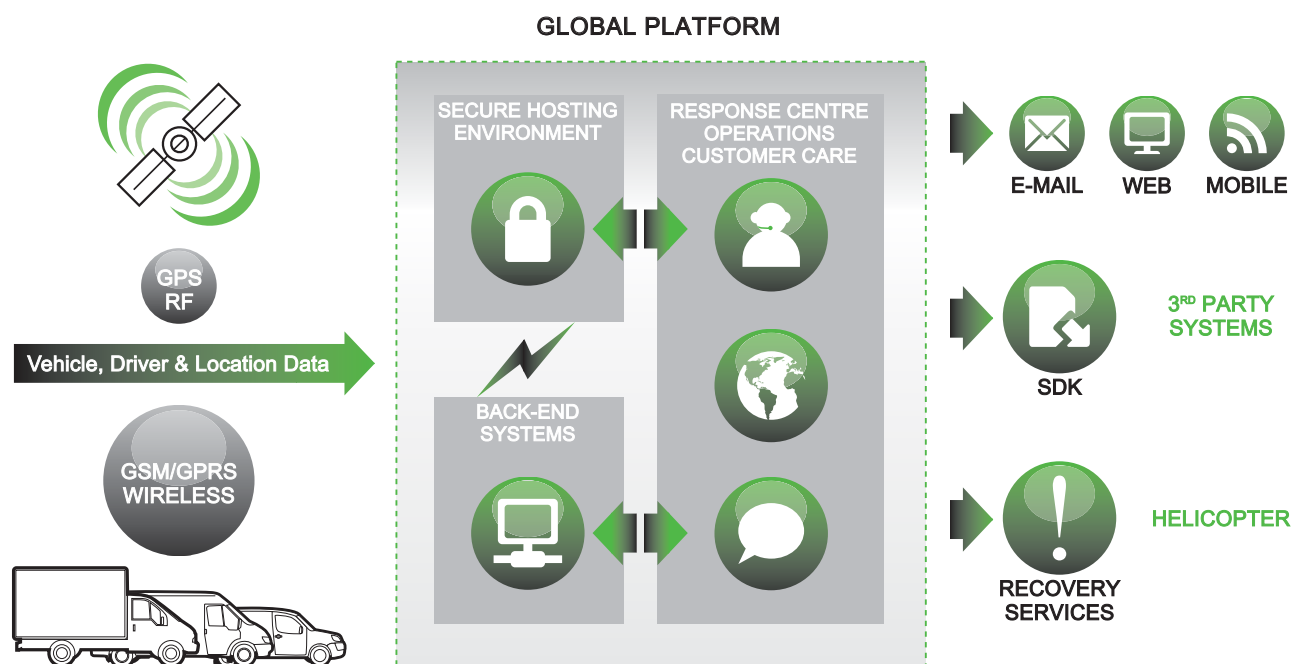

“Our hosted information service platform is capable of delivering targeted information to customers anywhere in the world in a secure and reliable manner.”

How the service works

Behind the scenes, MiX Telematics takes care of the data transfer, administration and management of your vehicle data, whilst an extensive security model ensures the right information is delivered to the right people, at the right time.

By subscribing to MIX Telematics' secure web-based service, you can view and manage your information in a secure manner with a web browser, anywhere, anytime. Information can also be delivered to your e-mail inbox or mobile phone.
