Amsterdam & Cape Town, SA Business Wire via ITWeb, 12 Apr 2011

(JSE:MIX), a global leader in fleet management technology and innovation, and , world-renowned for its collision prevention systems, have collaborated to boost driver safety through integrating their world-class .

means clients worldwide can benefit from improved driver safety and reduced accidents, as well as the knock on effect of reducing related costs.

Inside the vehicle, a small display unit coupled with audible alerts are used to warn drivers if motorbikes or pedestrians are detected in their paths and if they are deviating from their lane or driving too closely to the vehicle in front of them.

Back at the office, this same event ... Read more at ITWeb
