

More on offer with MiX Telematics, Intellichain alliance

Gert Pretorius, Managing
Director of MiX Telematics
(Enterprise)

Fleet management information and services provider MiX Telematics has partnered with Intellichain, a South African-based software solutions company.

The joint venture will translate into specialised cross-platform supply chain solutions for MiX Telematics' enterprise fleet customers. In conjunction with MiX Telematics' fleet management solutions, customers can now benefit from end-to-end, integrated supply chain management solutions that incorporate modules such as asset management, driver management, fuel management, stock management, routing and scheduling and transport execution management.

"... (the partnership) will lead to a streamlined, integrated and customised solution for our customers, between their new and existing hardware and software systems," said Gert Pretorius, Managing Director of MiX Telematics (Enterprise) in a press statement. "The value-add service will hereby enable our commercial fleet customers to optimise their business processes accordingly."

The enhanced integration capability will further enable MiX Telematics to provide fresh and valuable insights into their customers' operations, helping them to reduce fleet operating costs and enhance overall levels of efficiency, effectiveness and productivity.

Explains Willem Cilliers, Intellichain's Managing Director: "An intelligent technology approach and better use of real-time tracking information, equips customers in the supply chain arena with evolving functionality and provides them with a single view across their operation, thereby enabling effective management of operations and continuous business growth." ♦
